

INTRODUCING OUR LATEST TREATMENT

# SYLFIRM X - Dual Wave RF Microneedling

At The Devonshire Clinic, we only introduce treatments we truly believe in, those backed by robust science, trusted by dermatologists, and capable of delivering meaningful, visible results for our patients.

We are delighted to share that Sylfirm X is now available at the clinic.

## THE TECHNOLOGY

### Why Sylfirm X is unique?

#### Dual-Wave RF Microneedling

Sylfirm X uniquely combines both Continuous Wave and Pulsed Wave radiofrequency, the only device of its kind. This allows us to treat both the superficial and deeper layers of the skin in one session.

#### Targets the Basement Membrane

It selectively targets abnormal blood vessels and the dermal-epidermal junction, areas that drive pigmentation, rosacea, and vascular concerns, without harming surrounding healthy tissue.

#### Proven Collagen Remodelling

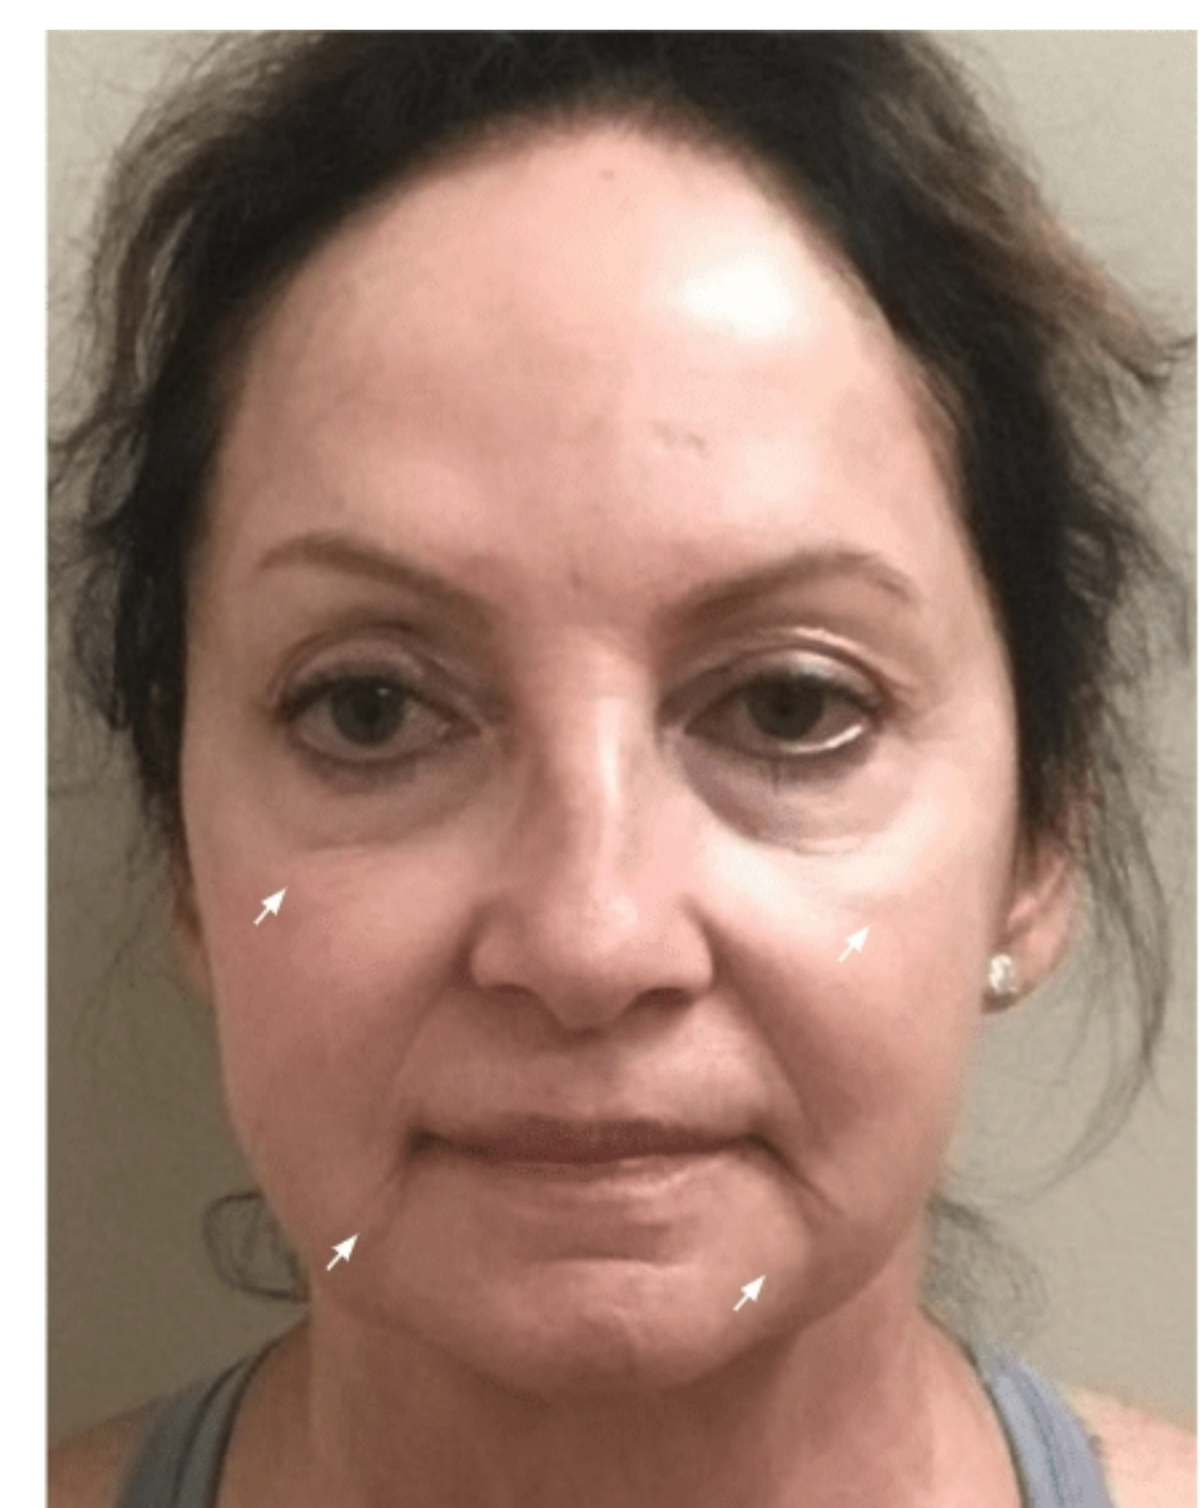

The radiofrequency energy stimulates deep collagen and elastin production, improving skin texture, firmness, and pore appearance over a course of treatments.

#### Safe Across All Skin Tones

Unlike many energy-based treatments, Sylfirm X has an excellent safety profile across all Fitzpatrick skin types, including skin tones that are more vulnerable to post-inflammatory hyperpigmentation.

### Before and After Photos

The best treatments are those that work with the skin's own biology, strengthening, renewing, and restoring from within. Sylfirm X does exactly that.

We are now booking consultations and treatments for Sylfirm X.

To find out whether this treatment is right for you, call the clinic to book a consultation with Elena Maxim, our Laser and Aesthetic Practitioner.
